

TOPIC 10-2: RECTANGLES

Because a rectangle is a special type of parallelogram, it has all of the properties of a parallelogram. However, the diagonals of a rectangle have an additional special relationship.

Name the diagonals of rectangle

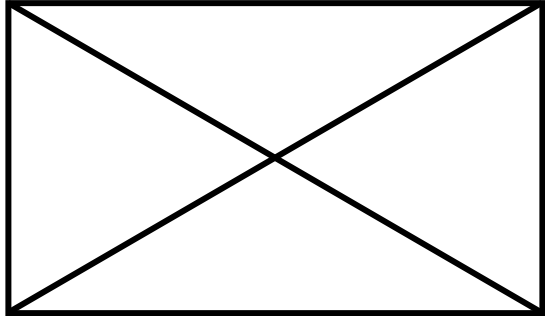

LMNO: _____

Find the length of each diagonal:

Thus, we can say that if a parallelogram is a rectangle, then its diagonals are _____.

So rectangles have seven properties...

Properties:	Picture:
1. Opposite sides are _____.	
2. Opposite sides _____.	
3. Opposite angles _____.	
4. Consecutive angles are _____.	
5. Diagonals _____ each other.	
6. It has four _____ angles.	
7. Diagonals are _____.	

EXAMPLE 1 Quadrilateral ABCD is a rectangle. $AC = 4x - 13$ and $DP = x + 7$. Find AC.

EXAMPLE 2 Use the rectangle KLMN and the given information to find the following.

$m\angle 1 = 70^\circ$

$m\angle 2 = \underline{\hspace{2cm}}$ $m\angle 3 = \underline{\hspace{2cm}}$

$m\angle 4 = \underline{\hspace{2cm}}$ $m\angle 5 = \underline{\hspace{2cm}}$

$m\angle 6 = \underline{\hspace{2cm}}$ $m\angle 7 = \underline{\hspace{2cm}}$

$m\angle 8 = \underline{\hspace{2cm}}$ $m\angle 9 = \underline{\hspace{2cm}}$

$m\angle 10 = \underline{\hspace{2cm}}$

EXAMPLE 3 Quadrilateral RSTU is a rectangle. If $m\angle RSU = (3x-5)^\circ$ and $m\angle UST = (4x+4)^\circ$, find $m\angle RSU$.

EXAMPLE 4 Use the figure below to answer the following.

- A) Find N to form rectangle LMNO.
- B) Find the intersection of \overline{OM} and \overline{LN} .
